Acetyl-I-carnitine is the acetylated form of Icarnitine, and the two compounds share similar energy and metabolism promoting properties. Found naturally in the body, acetyl-I-carnitine supports the availability of acetyl-CoA, an important energy-generating metabolite.<sup>1</sup> In addition, it supports healthy mitochondrial function and cell membrane stability.<sup>2</sup> A multicenter trial of 481 volunteers indicated memory, behavioral and emotional support with acetyl-I-carnitine supplementation.<sup>3</sup> In an evaluation of 28 elderly individuals using acetyl-I-carnitine or placebo, the supplemented group experienced enhanced emotional well-being.<sup>4‡</sup>
